

FCCSS Queries

Query 1: Transport Jobs with Vehicle & Partner Details

To view complete transport job information including which logistics partner is handling the job, which vehicle is assigned, the scheduled date, current status, and the amount payable for each transport job.

```
SELECT
    tj.JobID      AS "Job ID",
    lp.Name       AS "Partner Name",
    vh.VehicleType AS "Vehicle Type",
    vh.RegNo      AS "Registration No",
    vh.CapacityKg AS "Capacity (kg)",
    tj.SchedDate   AS "Scheduled Date",
    tj.Status      AS "Job Status",
    tj.AmtPayable  AS "Amount Payable"
FROM    TRANSPORT_JOB  tj
JOIN    VEHICLE        vh
        ON tj.VehicleID = vh.VehicleID
JOIN    LOGISTICS_PARTNER lp
        ON vh.PartnerID = lp.PartnerID
ORDER BY tj.SchedDate DESC;
```

Query 2: Total Subsidy per Scheme with Disbursement Count

To get a scheme-wise summary of all government subsidy disbursements, showing the scheme name, type, which crop it applies to, how many disbursements were made under it, and the total amount of money distributed so far.

```
SELECT
    ss.SchemeID      AS "Scheme ID",
    ss.SchemeName     AS "Scheme Name",
    ss.Type           AS "Scheme Type",
    ss.EligibleCrop    AS "Eligible Crop",
    COUNT(DISTINCT sd.FarmerID) AS "Farmers Benefited",
    SUM(sd.AmtDisbursed) AS "Total Disbursed (₹)"
FROM    SUBSIDY_SCHEME ss
```

```

LEFT JOIN SUBSIDY_DISBURSEMENT sd
    ON ss.SchemeID = sd.SchemeID
GROUP BY
ss.SchemeID,
ss.SchemeName,
ss.Type,
ss.EligibleCrop
ORDER BY SUM(sd.AmtDisbursed) DESC;

```

Query 3: Current Stock Available in Each Warehouse

To check the current crop stock available across all warehouses, broken down by cooperative, crop name, and grade. So the cooperative can monitor inventory levels and plan procurement or fulfillment accordingly.

```

SELECT
    wh.WarehouseID      AS "Warehouse ID",
    wh.Location          AS "Location",
    cs.Name              AS "Cooperative Name",
    inv.CropName         AS "Crop Name",
    inv.Grade            AS "Grade",
    SUM(inv.QtyAvailKg)  AS "Total Stock (kg)"
FROM    WAREHOUSE      wh
JOIN    COOPERATIVE_SOCIETY cs
    ON wh.CoopID = cs.CoopID
LEFT JOIN INVENTORY    inv
    ON wh.WarehouseID = inv.WarehouseID
GROUP BY
    wh.WarehouseID,
    wh.Location,
    cs.Name,
    inv.CropName,
    inv.Grade
ORDER BY SUM(inv.QtyAvailKg) DESC;

```
